The Sherwin-Williams Difference

Pro Focus

Special pricing and resources for painting contractors and facility managers

Knowledgeable, Dedicated Support

Sales representatives and store associates who know your business and are focused on your success

Unmatched Industry and Specification Expertise

Industry and technical experts to answer your questions on any projects you may be involved in

High-Performance Coatings and Systems

Broad portfolio of coatings that enable fast return to service and minimize downtime

Unparalleled Distribution Network

Local stores and delivery to provide you with what you need, when and where you need it

One Stop, One Invoice

Not just coatings – supplies, equipment and everything else you need for your project or facility

The Value We Provide

Sherwin-Williams Protective & Marine delivers world-class industry subject matter expertise, unparalleled technical and specification service, and unmatched regional commercial team support to our customers around the globe. Our broad portfolio of high-performance coatings and systems that excel at combating corrosion helps customers achieve smarter, time-tested asset protection. We serve a wide array of markets across our rapidly growing international distribution footprint, including Oil & Gas, Water & Wastewater, Bridge & Highway, Steel Fabrication, Flooring, Food & Beverage, Fire Protection, Marine, Rail and Power.

Choosing The Right Brush

Selecting the right brushes is a crucial step in making your paint jobs look better while helping you to do your work more easily and efficiently.

Brushes

A paint brush is a very personal tool. That is why there are many different sizes and styles from which to choose. A brush is an ideal choice when painting trim, corners and small areas. Also, a specialty paint brush should be used for projects like painting furniture, exterior decks and railings. When selecting a brush, you'll want to consider the following attributes:

Bristle Type

- **Nylon and polyester bristle:** These synthetic materials are designed to hold their shape with today's popular latex paints. A good quality nylon and polyester blended brush is the best choice for all latex paints and coatings. Many painters prefer a synthetic brush for oil coatings as well.
- **Natural China bristle:** High-quality natural China bristle brushes have qualities that control oil-based coatings for better flow and leveling for the smoothest finish. A natural China bristle brush is the best choice for oil-based paints, stains and varnishes.

Brush Styles

- **Angle:** Bristles are precisely trimmed at an angle that allows painters to hold the brush more comfortably while painting trim and corners.
- **Trim:** Trim brushes have a straight cut-line and are also used for painting trim and corners. They can also be used for larger areas. Some painters prefer a straight edge versus an angled cut.
- **Wall:** A wall brush is a larger brush with a straight cut-line. It is better used for larger areas like walls or side paneling.

Brush Size

Personal preference is always a factor in choosing a brush width, but a good rule of thumb is:

- **1 to 2 inches:** For small spaces, tight trim areas, touchups and detail work.
- **2-1/2 to 3 inches:** For cabinets, bare boards, fences, doors, steps and shelves.
- **4 to 5 inches:** For larger areas like walls, ceilings, exterior house painting, paneling and floors.

Brush Quality

Good brushes bring outstanding results. Sherwin-Williams has continually been at the forefront of brush technology. Contractor Series and Purdy offer several different product lines:

- **Nylon/Polyester and 100% Nylon Brushes:** A specific blend of nylon and polyester filaments make this brush a fine finishing tool that is very durable and easy to clean. The white nylon tips are precisely flagged and tapered for a sharp cut-line. These characteristics have made this line the most popular choice for latex paints for the past 15 years. Sherwin-Williams sells 20 different sizes of these Contractor Series brushes.
- Although nylon is a soft material, it is also the strongest and most expensive material in a paint brush. 100% nylon brushes offer extreme durability, even when used on rough or abrasive surfaces. 100% nylon brushes are finished using several hand-trimming steps to create a superior cut-in tool.
- **Black and White China Bristle Brushes:** By nature, Black China bristle is stronger and thicker coarse hair, which makes it the perfect bristle to use with oil-based paints and epoxies. The highest quality Black China bristles available are used in the Contractor Series line.
- White China bristle, by contrast, is soft and thin. A white China bristle brush is the perfect tool for stain, varnishes, polyurethanes and all clear coatings. It lays these topcoats on with a glass-smooth finish. White China bristle brushes are also suitable for oil-based paints if a softer flex tool is desired.
- **Black China/Ox-Hair Blend Brushes:** Ox-hair is extremely fine and soft, creating an exceptional tool for fine finish work. Black China/ox-hair blend brushes offer a perfect tool for special jobs or to provide a very soft brush feel.

Check out our Brush & Roller Guide online for more information on choosing the right brush.

Purdy's Black China bristle brushes have long been the mainstay of professional painters. Recognized for its ability to hold and deliver more paint than any other material, Black China bristle reaches its ultimate potential in Purdy's handcrafted professional brushes. Starting with the finest bristles which are cleaned and straightened, varying bristle lengths and stiffnesses are blended to deliver exceptional quality, wearability and performance when applying oil-based enamels, primers and stains.

Choosing The Right Roller Cover

Selecting the right roller covers is a crucial step in making your paint jobs look better while helping you to do your work more easily and efficiently.

Roller Covers

Rollers help you paint large, flat surfaces in much less time than a brush. They are also excellent for use on all walls, stucco, concrete or any other flat surface. Here are some options to consider when purchasing a roller cover:

Roller Cover Material

- **Nylon/polyester:** Synthetic roller covers are ideal for applying latex paints. They resist matting and hold their shape for a smooth finish.
- **Natural fiber covers:** Roller covers that are made from natural fiber include mohair and lambswool. They are ideal for oil-based coatings.
- **Blended covers:** Roller covers made from a blend of natural and synthetic fibers are excellent multipurpose covers and can be used with all paints.

Roller Length

Standard roller length is nine inches. For smaller areas, a four-inch or seven-inch roller cover may be desired. For larger area walls and floors, 14-inch and 18-inch rollers may increase productivity.

Pile Depth

Roller covers vary in nap length. The nap is determined by the surface texture to be painted:

- 1/4-inch, 3/16-inch: For very smooth surfaces like metal doors and plaster.
- 3/8-inch, 1/2-inch: For smooth and semi-smooth surfaces like drywall.
- 3/4-inch: For semi-rough surfaces like wood or a textured ceiling.
- 1-inch, 1-1/4-inch: For rough surfaces like stucco or a heavily textured ceiling.
- 1-1/2-inch: For extremely rough surfaces like concrete block.

Roller Quality

As with brushes, the initial extra investment in higher-quality rollers and covers will pay off in the final look and ease of application. Lesser-quality roller covers may leave streaks or nap fibers on the painted surface. Sherwin-Williams offers several varieties of high-quality roller covers.

- **Polyester Knit:** The most popular roller cover sold by Sherwin-Williams. Specially formulated for today's latex coatings. The highly crimped fibers offer the best protection against matting.
- **Soft Woven:** Rivals polyester knit in popularity. Recommended for both latex and oil coatings, they do a fine job with gloss and semi-gloss coatings.
- **Wool/Polyester Knit:** Fifty percent of the roller cover fiber is natural wool, which allows for greater paint pickup and delivery. Fifty percent is polyester, which helps the roller keep its shape during prolonged use. The blend results in an excellent balance of productivity and low matting.
- **Merino Sheepskin:** Pick up and release more paint than any other roller cover. Many painters use Merino Sheepskin exclusively for any type of coating, claiming it lasts a long time with proper care.
- **Mohair:** Features a blend of soft natural angora mohair with synthetic fibers to produce the smoothest finish possible with a roller cover. Recommended for use with gloss and high gloss coatings.
- **Nylon/Polyester:** A nylon and polyester combination creating a smooth, even finish on any surface. This combination also provides excellent durability and reduces matting.
- **Microfiber:** A highly absorbent fabric that has great release and leaves a smooth finish. It's great for all paints and stains, leaving less spatter. This is a shed-resistant cover that performs well on smooth surfaces with heavy-bodied coatings.
- **Woven Wool:** 100% knitted wool fibers. For use with oil or latex coatings. Naturally absorbent wool for maximum pickup and release. Durable, solvent-resistant core.

Roller Covers

- For medium and large repairs
- Great for drywall and plaster

Size	Sales No.
Qt.	6510-03980

3M™ Large Hole Repair Backer Plates

Reparación de grandes hoyos placa trasera 3M™

- Great for drywall and plaster
- When used with 3M Wall Repair Fiber Reinforced Compound, repairs dry 5x faster and are 2x stronger (compared to other 3M spackles)
- Repair damaged areas on walls and ceilings

Sales No.
6510-42913

Sheetrock® All Purpose Joint Compound – Ready Mixed

Compuesto para juntas multiuso Sheetrock®, mezcla lista

- Versatile uses – taping, topping and hand-applied texturing
- Smooth application, long-lasting performance
- Ideal for repairing plaster cracks
- Available in various sizes of pails and cartons

Not all products available in all areas. See your local Sherwin-Williams store for available sizes.

Sheetrock® Ultra Lightweight All-Purpose Joint Compound

Compuesto para juntas multiuso ultraliviano Sheetrock®

- Up to 40% lighter than conventional-weight joint compound. Easier to use, move and store
- Excellent adhesion for consistent taping performance. Tape and finish with one product
- Delivers a tough finish yet sands easily. Saves time in sanding
- Easier flow and less effort during application. Great with automated and hand tools

Size	Sales No.
4.5 Gal.	123-0044

Sheetrock® Lightweight Ready Mixed All Purpose Joint Compound – Plus 3™

Compuesto para juntas multiuso liviano, mezcla lista Sheetrock®, Plus 3™

- Weighs up to 35% less than conventional compounds
- Low shrinkage – only two coats needed over metal
- Eliminates need for taping and topping compounds
- Sands more easily than conventional compounds
- Available in various sizes of pails and cartons

Not all products available in all areas. See your local Sherwin-Williams store for available sizes.

Sheetrock® Topping Joint Compound – Ready Mixed

Compuesto para juntas de capa final Sheetrock®, mezcla lista

- Low shrinkage; ideal as second and third coats
- Easy to apply and sand; smooth finishing
- Available in various sizes of pails and cartons

Sheetrock® Lightweight Setting-Type Joint Compound – Easy Sand™

Compuesto para juntas tipo asentamiento liviano, Easy Sand™

- Weighs 25% less than conventional setting-type compounds
- Easy sanding – similar to ready-mixed, all-purpose compound
- Provides excellent bond, low shrinkage, humidity resistance and check-crack resistance
- Available in various setting times: 5, 20, 45 and 90

Not all products available in all areas. See your local Sherwin-Williams store for available sizes.

Not all products available in all areas. See your local Sherwin-Williams store for available sizes.

FibaTape® Self-Adhesive Perforated Aluminum Wall & Ceiling Repair Patch

Parche para reparación de pared y techo de aluminio perforado autoadhesivo FibaTape®

- Self-adhesive
- Metal reinforced strength
- Unique perforated design for tough repairs
- Contains 3 patches for multiple repairs

FibaTape® Self-Adhesive Glass Mesh Joint Tape

Cinta para juntas de malla de vidrio autoadhesiva FibaTape®

- Quick and easy joint taping
- Pressure-sensitive adhesive backing
- Strong reinforcement, eliminates pre-plastering
- May be used with any type of joint compound

Size

1 – 6" x 6";
2 – 4" x 4"

Sales No.

120-6473

Size

1-7/8" x 300'

Sales No.

153-4767

**FibaTape® Perfect Finish™
Ultra Thin Drywall Tape**

Cinta para yeso ultradelgada FibaTape® Perfect Finish™

- Thinner profile – over 30% thinner than standard paper drywall tape and regular fiberglass mesh tape – without compromising strength
- Self-adhesive tape – saves time by eliminating the need for pre-bedding coat
- Ideal for butt-end joints – requires less compound for easier feathering and sanding

Size	Sales No.
1-7/8" x 300'	138-0849

Sheetrock® Joint Tape

Cinta para juntas Sheetrock®

- Superior center creasing for trouble-free corner finishing
- High-strength to resist tearing, stretching and wrinkling
- Processed for superior bond
- Wafer-thin for easy joint treatment

Size	Sales No.
250 Ft.	155-7875

Drywall Tape Reel

Carrete para cinta para panel de yeso

- Holds 250' and 500' rolls of drywall tape
- Frees hands for taping
- 100% all steel construction, plated to prevent corrosion and ensure durability
- Belt clip is 4" long to accommodate most belts
- Paper tape is fed through the bottom slot to keep the end of the tape handy and allows one-handed tearing

Sales No.
936-9976

Special Order

Aluminum Stilts

Pedido especial: pilotes de aluminio

- Adjustable heights 18" to 28"
- Load weight 225 lbs.
- High strength aluminum alloy with zinc plated steel working parts
- Rubber soles to prevent slipping

Watch Dog® Lift Away® Graffiti Remover

Limpiador de graffiti Watch Dog® Lift Away®

- Versatile graffiti remover; effective application for a variety of graffiti-plagued substrates
- Safe, environmentally friendly, water-based formulation
- Single application will remove most graffiti; works effectively on spray enamels, markers, ink, crayon, etc.

Size

22 Fl. Oz.

Sales No.

6509-77952

Strypeeze®

Strypeeze®

- General purpose, semi-paste stripper; clings to rounded and upright surfaces
- Anti-evaporate “film” to minimize evaporation – gives solvent more time to penetrate layers
- For interior or exterior work
- Sludge removed by scraping or wash-off method
- Formulated without methylene chloride or NMP

Size	Sales No.
1 Qt.	6510-99574
1 Gal.	6510-99608

SuperStrip®

SuperStrip®

- Formulated without methylene chloride or NMP
- Recommended for softening extremely tough finishes: industrial enamels, varnishes, lacquers, etc.
- Heavy bodied – clings to vertical or irregular surfaces
- Sludge removed with scraper

Size	Sales No.

Choosing The Right Equipment

Selecting the right equipment is a crucial step in making your facilities look better while helping you to do your work more easily and efficiently.

How to Choose the Right Gas or Electric Airless Sprayer

There has never been a wider selection of professional coatings to choose from, and today's professional airless sprayers are designed to improve fluid delivery for the widest range of viscosities. Airless sprayers will help you achieve quality finishes consistently, while increasing your profitability through improved production rates. When choosing an airless sprayer, you want to consider how and where you will be using it:

Coatings/Tip Size Requirements

- .009 – .015 for stains
- .011 – .017 for lacquers
- .013 – .021 for latex-based coatings
- .013 – .017 for oil-based coatings
- .019 – .031 for block fillers
- .019 – .035 for smooth elastomerics

Power Source

- If your jobs require portability, choose a gas-powered unit.
- For indoor applications demanding quiet operation, no emissions and reduced maintenance requirements, choose an electric-powered unit.
- Some sprayers are convertible from gas to electric for optimum versatility.
- For small jobs and touch-up, choose a handheld sprayer.

Features

- Choose higher GPM (Gallons Per Minute) for increased paint delivery.
- Choose appropriate number of guns for your maximum crew size and application requirements.
- Choose hose length capabilities that encompass both existing and future applications.

How to Choose the Right HVLP and Fine Finish Sprayer

HVLP Sprayers or High Volume Low Pressure sprayers use high air volume at low air pressures to provide the most efficient atomization for finishing work. Air-assisted airless sprayers use an on-board compressor along with an airless sprayer, producing a higher atomized spray pattern than just using airless spray.

Productivity

Match your equipment purchase to the desired productivity level of your jobs. HVLP sprayers are designed for small detailed work that requires the highest quality finish while air-assisted airless sprayers are designed for large jobs that demand a high-quality finish.

Finishing Materials

With the wide variety of finishing coatings ranging from light varnishes and stains to heavier latex-based materials, choose the equipment needed to spray your most commonly used material.

How to Choose the Right Line Striper

Airless line strippers can be gas-powered, electric or adjustable from gas to electric for optimum versatility. They produce precise traffic lines, using all categories of traffic paints, without thinning. When choosing an airless line striper, first consider the following:

GPM

Regardless of PSI, an increase in GPM will increase your output. As a general guideline:

- Output levels should be chosen based on typical line width selections and desired walking or riding speeds.
- Choose the GPM levels that support your desired tip sizes.

Line Width/Mil Thickness/Travel Speed

Higher speeds, wider and thicker lines require greater GPM and tip support.

Examples:

Lines 4 inches wide at a travel speed of 5 mph require a minimum of .75 GPM.
Lines 4 inches wide at a travel speed of 10 mph require a minimum of 2.0 GPM.

Features

Choose from special features that provide easy gun adjustments, improved maneuverability and high-quality lines.

How to Choose the Right Pavement Specialty Equipment

Why Choose Thermoplastic for Striping?

Thermoplastic “hot” applied striping is becoming the preferred line striping method for DOTs all around the USA. Why?

- Long-lasting lines: up to 5 times longer than alternatives
- Safe: retroreflectivity is built into the thermoplastic material
- Profit: more profit per foot than most alternative methods
- Simple to use: short learning curve = long-lasting knowledge for operators

How to Choose the Right Line Striper Driver

When deciding which Line Striper Driver is right for you, consider the following:

- User fatigue: how much do you want to walk versus ride?
- Size of equipment you want to propel
- Maximum power: LineDriver 160cc, LineDriver HD 200cc
- Starting method

How to Choose the Right Scarifier

When deciding which scarifier to choose, it's important to consider the following:

- Type of application: paint stripes, epoxy stripes, thermoplastic stripes or inlay
- Type of surface: Asphalt, concrete or other
- Type of cutter: Carbide “flail,” carbide “miller” or diamond blade
- Maximum power: 270cc, 390cc or 480cc
- Speed of removal: the larger the engine, the faster the removal

How to Choose the Right Pressure Washer

With today's technologically advanced, environmentally friendly coatings, proper surface preparation is more critical than ever for coating performance. When choosing a pressure washer, first consider the following:

Hot or Cold Water

- Hot water pressure washers are used when cleaning applications are required and are ideal for removing oil and grease.
- Cold water pressure washers are used when general surface preparations are required.

How to Choose the Right Pressure Washer (Cont.)

Belt Drive or Direct Drive

The direct drive cold water units have evolved into a medium duty contractor application. Their compact size and portability have made this unit a useful tool for the small to medium contractor. For the medium duty application, the direct drive unit will more than satisfy the user's needs.

Maximum Pressure

- 1000 – 2000 PSI – small residential and light commercial applications
- 2000 – 3000 PSI – mid-sized residential, commercial and maintenance applications
- 3000 – 5000 PSI – larger commercial, maintenance and industrial applications

Features

Choose from a wide range of accessories.

How to Choose the Right Texture Sprayer

The needs of the texture sprayer application industry have been constantly changing. It is now more critical than ever to match up the right equipment with your coatings to achieve maximum performance and desired texture finishing. When choosing a texture sprayer, first consider the following:

Productivity

Match your equipment purchase to the desired productivity level of your jobs. Equipment is available for use on small touch-ups to large commercial jobs.

Texture Materials

There is a wide variety of texture materials from simulated acoustics to stone paints. Match your equipment purchase to the texture materials you will spray.

Versatility

Determine the versatility that is needed on your job applications. Match your equipment purchase to the desired power source (electric, gas, air-operated) and the hose length that will maximize your performance.

Electric Airless Sprayers

Rociadores sin aire eléctricos

TITAN

FlexSpray™ Handheld

Equipo portátil FlexSpray™

- JetForce Technology creates the power equal to a 4-stage HVLP and the productivity of an airless using a 413 tip
- Provides a professional HVLP style finish
- Spray a variety of coatings for multiple applications
- 10x the life of other handheld sprayers
- Sprays: stains, lacquers, alkyd-based paints and latex-based paints

Widespray™ Tip

Boquilla Widespray™

- 24" fan pattern for greater production
- Perfect for high-production applications such as commercial buildings, convention centers, warehouses and track housing

RAC X™ WideRAC SwitchTips

Boquillas SwitchTips RAC X™ WideRAC

- Spray double the area in half the time
- Wider fan pattern results in fewer passes
- Ideal for high production and new construction applications

Fine Finish Tips

Boquillas con acabado fino

- Dual orifice for optimum performance at lower pressures
- Particle size up to 27% smaller than a standard tip
- Great for cabinets, shutters, doors and trim work

Flat Tips

Boquillas niveladas

- Specially formulated tungsten carbide orifice for optimum hardness and wear resistance
- Recommended for architectural coatings containing high particle content

RAC® 5 Handtite Tip Guard

Protección de la boquilla Handtite RAC® 5

- Seals when hand tightened — no tools required
- Aerodynamic design directs the material flow
- Design creates a tighter, more consistent spray pattern
- Overspray is minimized — ideal for fine finish applications
- Paint build-up is virtually eliminated as well as dripping and spitting

RAC® 5 Reverse-A-Clean SwitchTip™

SwitchTip™ Reverse-A-Clean RAC® 5

- One seal for all fluids
- Aerodynamic design reduces paint build-up
- Patented design allows you to switch tips without tools when using latex paint
- Clean clogs with simple flip of the SwitchTip
- Most spraying conditions produce little paint accumulation in a day's use
- Most common sizes easily available

Size	Sales No.
Varies	Direct

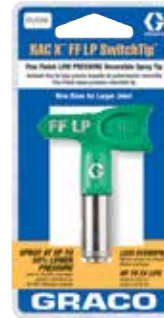

Sales No.

RAC X™ SwitchTip™

RAC X™ SwitchTip™

- Premium Graco airless tip line — 107 sizes for every application
- Longest tip life — usable fan pattern and highest quality spray finish
- OneSeal tip — “no tool” installation
- Easy to identify tip size — large raised tip size numbers
- Easy to use — tip “snaps” in spray position or reverse position

RAC X™ FFLP – Fine Finish Low Pressure Airless Tips

Boquillas sin aire con baja presión de acabado fino FFLP RAC X™

- Industry first architectural paint low pressure atomization!
- Breakthrough atomization — Superior spray finish quality with complete atomization at reduced spraying pressures
- Breakthrough reliability — Longer tip life at low pressures, less spray pattern collapse and less stress and strain on sprayer
- Full range of tip sizes available from .008 to .020

TR¹ HEA Tips

Boquillas HEA TR¹

- Ideal for new residential, residential repaint and commercial applications
- Optimized to atomize paints and coatings at 1000 PSI with no loss in production
- Up to 55% less overspray
- Two times the life of a standard reversible tip
- Longer sprayer life — pump more gallons before repack is needed

Adjustable Spray Tips

Boquillas ajustables para rociadores

- Control fan widths from 2" to 22" without changing tips
- Unclogs easily with the twist of the tip
- Wear parts made of tungsten carbide

Extension Ladders

Scaffolds & Planks

Accessories

Choosing the Right Ladder

Different people, projects, and tasks that you do require the use of ladders of varying styles, sizes, grades, and materials. Understand the four key elements in ladder selection and choose the right ladder for the job!

Duty Rating

Type IAA	Type IA
375 Lbs. Extra Heavy-Duty	300 Lbs. Extra Heavy-Duty
Typical uses: • Heavy-Duty Industrial Construction • Heavy-Duty Building • Heavy-Duty Roofing • Heavy-Duty General Contracting	Typical uses: • Industrial Construction • Building • Roofing • General Contracting

Type I	Type II	Type III
250 Lbs. Heavy-Duty	225 Lbs. Medium-Duty	200 Lbs. Light-Duty
Typical uses: • General Contracting • Building • Maintenance • Drywalling	Typical uses: • Light Commercial • Painting • Cleaning • Light Repair	Typical uses: • Painting • Yardwork • Chores

Style

Indoors, a step stool, stepladder, platform or multi-purpose ladder is usually recommended. Outdoors, a taller step, multi-purpose or extension ladder is often more appropriate. Different styles of ladders are designed to keep the user safe and productive when climbing.

Choose the Right Extension Ladder

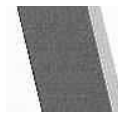

Height to Gutter or Top Support Point	Buy This Size Extension Ladder*
9' Max	16'
9' – 13'	20'
13' – 17'	24'
17' – 21'	28'
21' – 25'	32'
25' – 28'	36'
28' – 31'	40'

*Reflects section overlap, ladder angle and 3' extension above roof line

Material

Werner® offers ladders made from fiberglass and aluminum. *How do you know which material would be best for you?* We suggest that if you only buy one ladder, fiberglass should be your choice. However, each material has characteristics which make it best for certain applications, and one material may be better suited to the work environment or work application of the user.

Fiberglass

- Electrically non-conductive
- Great value
- Strong
- Leading choice of professionals

Aluminum

- Strong
- Lightweight
- Corrosion resistant

Size

Choosing the right size or length ladder is just as important as the style. One of the most common and potentially dangerous ladder selection mistakes is purchasing a ladder which is either too short or too long.

Choose the Right Stepladder

Maximum Height You Want To Reach**	Buy This Size Stepladder
7'	3'
8'	4'
9'	5'
10'	6'
11'	7'
12'	8'
14'	10'
16'	12'
18'	14'
20'	16'

**Assumes a 5'6" person with a vertical 12" reach
